

Team Assignment
Theme Park Website

Midterm Assessment - Coursework 1.1
Due: 2021.07.05

—

Team 81

DAMIAN BINKOWSKI, BRENT GRATIAS, HUNG WEIJU, JĘDRZEJ LEWANDOWSKI, MAX SERGUEEV

CM1040 Web Development
University of London
April 2021 Cohort

Purpose of the website

The website will advertise the theme park's features and provide park information to users for the purpose of drawing guests into the theme park and facilitating ticket sales.

The website will be the primary source of information for young families with children, couples, and teenagers while planning their trip and during their visit to the park. Informed by this young demographic and the fun family friendly atmosphere we wish to engender we decided on a bright airy feeling website with lots of white space and a heavy emphasis on primary colours.

See *Appendix 1 - Purpose of the Website Record of Discussion* for a record of our team's discussion.

Research other Theme Parks

Our team has performed extensive research of websites for other theme parks to ensure we meet the needs of our client. Following is a list of the websites that were reviewed.

1. Damian - Adventure Park USA
2. Jedrzej - Efteling, World of Wonders
3. HungWeiju - Formosan Aboriginal Culture Village
4. Brent - Calaway Park
5. Max - Parc Astérix

When discussing our research together we discovered we had many likes and dislikes in common. This research informed the decisions we made together in the design of our site.

Positive observations:

- Simple navigation menus
- Consistent, clean, and informative design across the entire site
- Navigation menu and 'call to action' button on every page
- Bright, happy colours
- Dynamic pages that use subtle animation to add interest
- Easy accessibility to essential information (location, hours, services, etc.)

Negative observations:

- Too much content crowded onto a single page
- Complicated menus with too many options leading to too many pages
- Popups and too much dynamic content, overwhelming the user

See Appendix 2 - Record of Theme Park Research for a record of our team's findings.

Content of the Website

We decided on an amusement park with no specific theme apart from a place where families could have fun together. We chose the name ParcPark with the slogan "feel the Magic!" Our park will have thrill rides, kids rides, places to eat, and other miscellaneous attractions.

We propose a website with the following content:

- Prominent space on the home page for notices, features and park events
- Ticket purchase button prominently located on each page of the site
- Photos, descriptions, entry requirements for all rides and attractions
- Photos, descriptions, average prices for food venues
- Park map with relative locations for attractions and services
- Schedule to performances and special events in the park
- Social media links (Facebook, Instagram, YouTube, etc.)
- Park information including ticket prices, and opening hours
- List with description of client services provided by the park
- Map of park location with address and contact information
- Information on public transportation and parking

See Appendix 3 - Content of the Website Record of Discussion for a record of our team's discussion.

Structure of the Website

We propose the following overall structure for a three page website. Each page will have a header with navigation, the park logo, and a prominent "call to action" button for purchase of park entry tickets. The footer on each page will contain the theme park's address and contact information and social media links.

I. Home Page

The top of the page will show a nice big picture conveying the vibe of the park. Below the picture are content cards which may be easily customized to show current events and park promotions.

II. Park Attractions, Food and Entertainment

This page will contain a complete list of the theme park's rides and attractions categorized by the type of guest. Each entry will have photos, a description, and minimum entry requirements.

Below the Attractions will be entries for other park features including restaurants, snack carts, sitting areas, shopping and entertainment venues.

III. Information and Park Services

Here will be everything a visitor needs to plan his or her visit to the park. Opening hours, ticket pricing, parking and transportation options as well as a map and full address and contact information.

See Appendix 4 - Structure of the Website Record of Discussion for a record of our team's discussion.

Website wireframes

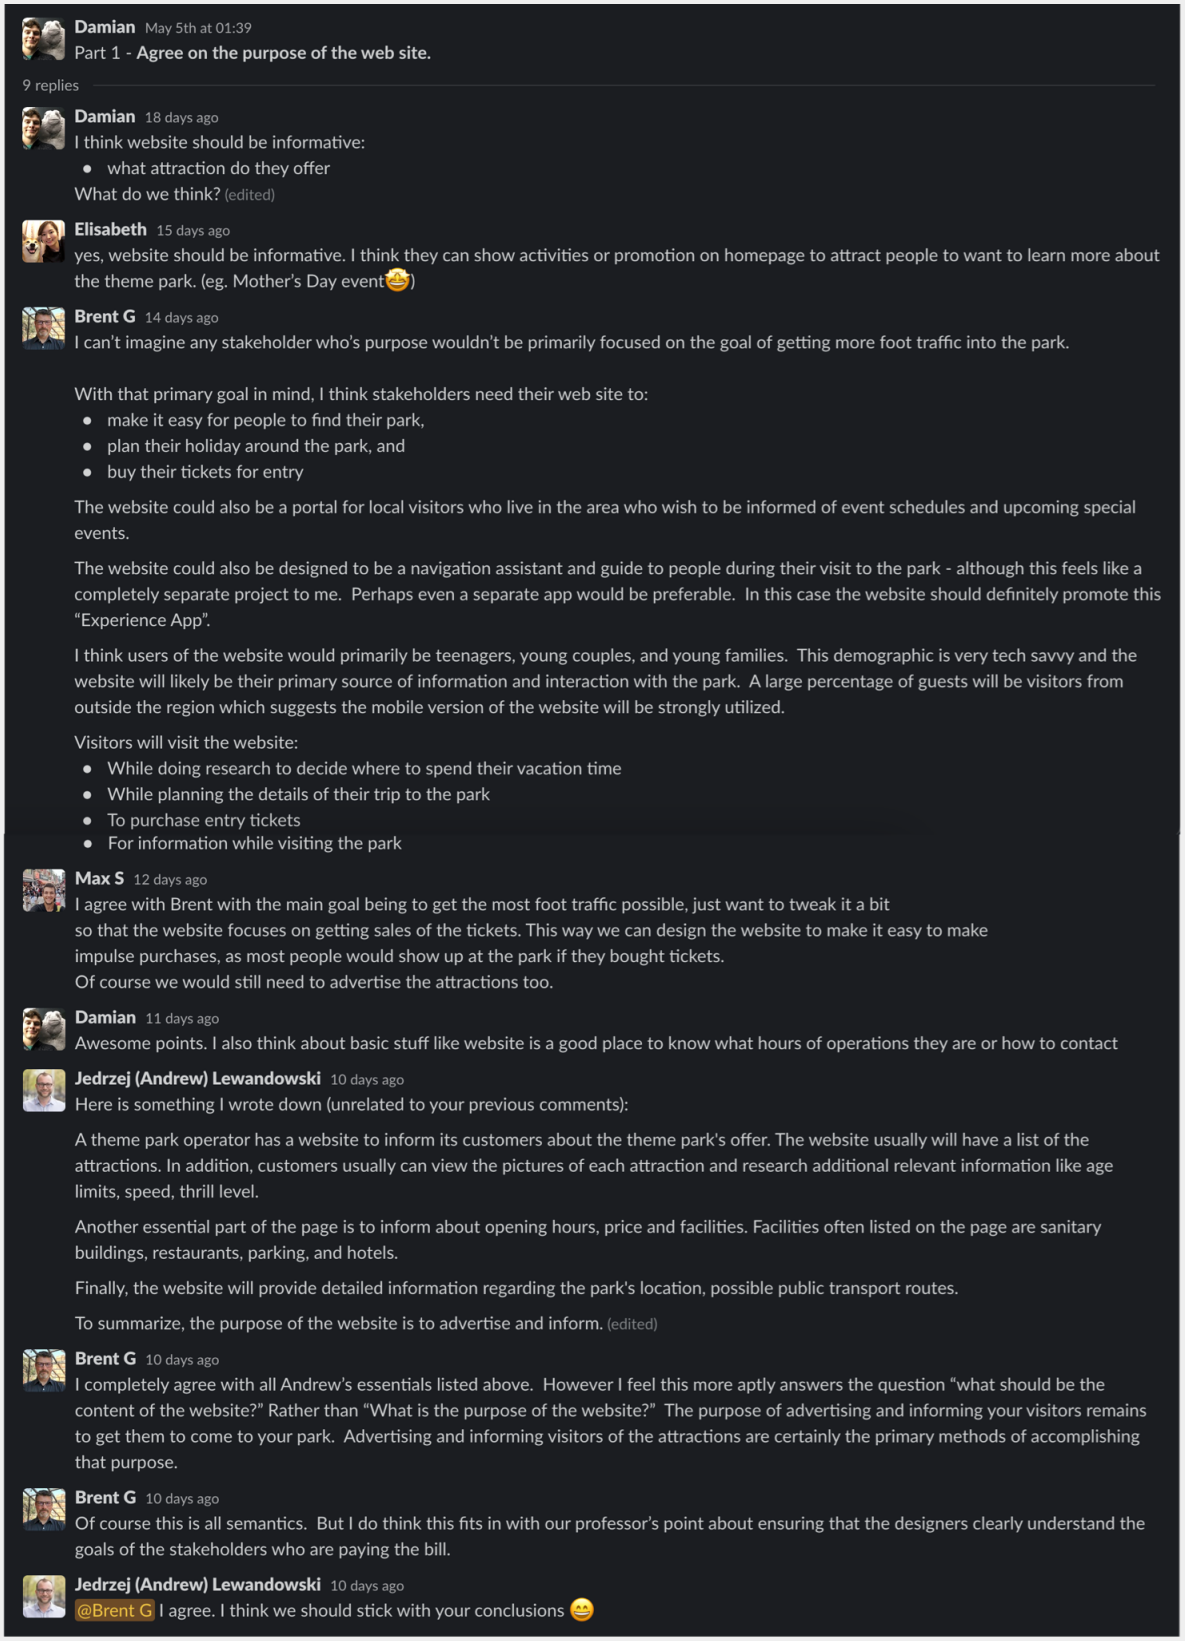

Included with this document please find file *"WD_T81_wireframe_diagram.pdf"* which contains our proposed wireframe design of the website.

On behalf of our team, thank you for the opportunity to work on this project with you. We look forward to hearing your views of our proposal and are eager to present you with a working model of your new website!

Damian 18 days ago
I think website should be informative:
- what attraction do they offer

What do we think? (edited)

Elisabeth 15 days ago
yes, website should be informative. I think they can show activities or promotion on homepage to attract people to want to learn more about the theme park. (eg. Mother's Day event)

Brent G 14 days ago
I can't imagine any stakeholder who's purpose wouldn't be primarily focused on the goal of getting more foot traffic into the park.

With that primary goal in mind, I think stakeholders need their web site to:
- make it easy for people to find their park,
- plan their holiday around the park, and
- buy their tickets for entry

The website could also be a portal for local visitors who live in the area who wish to be informed of event schedules and upcoming special events.

The website could also be designed to be a navigation assistant and guide to people during their visit to the park - although this feels like a completely separate project to me. Perhaps even a separate app would be preferable. In this case the website should definitely promote this "Experience App".

I think users of the website would primarily be teenagers, young couples, and young families. This demographic is very tech savvy and the website will likely be their primary source of information and interaction with the park. A large percentage of guests will be visitors from outside the region which suggests the mobile version of the website will be strongly utilized.

Visitors will visit the website:
- While doing research to decide where to spend their vacation time
- While planning the details of their trip to the park
- To purchase entry tickets
- For information while visiting the park

Max S 12 days ago
I agree with Brent with the main goal being to get the most foot traffic possible, just want to tweak it a bit
so that the website focuses on getting sales of the tickets. This way we can design the website to make it easy to make
impulse purchases, as most people would show up at the park if they bought tickets.
Of course we would still need to advertise the attractions too.

Damian 11 days ago
Awesome points. I also think about basic stuff like website is a good place to know what hours of operations they are or how to contact

Jedrzej (Andrew) Lewandowski 10 days ago
Here is something I wrote down (unrelated to your previous comments):

A theme park operator has a website to inform its customers about the theme park's offer. The website usually will have a list of the attractions. In addition, customers usually can view the pictures of each attraction and research additional relevant information like age limits, speed, thrill level.

Another essential part of the page is to inform about opening hours, price and facilities. Facilities often listed on the page are sanitary buildings, restaurants, parking, and hotels.

Finally, the website will provide detailed information regarding the park's location, possible public transport routes.

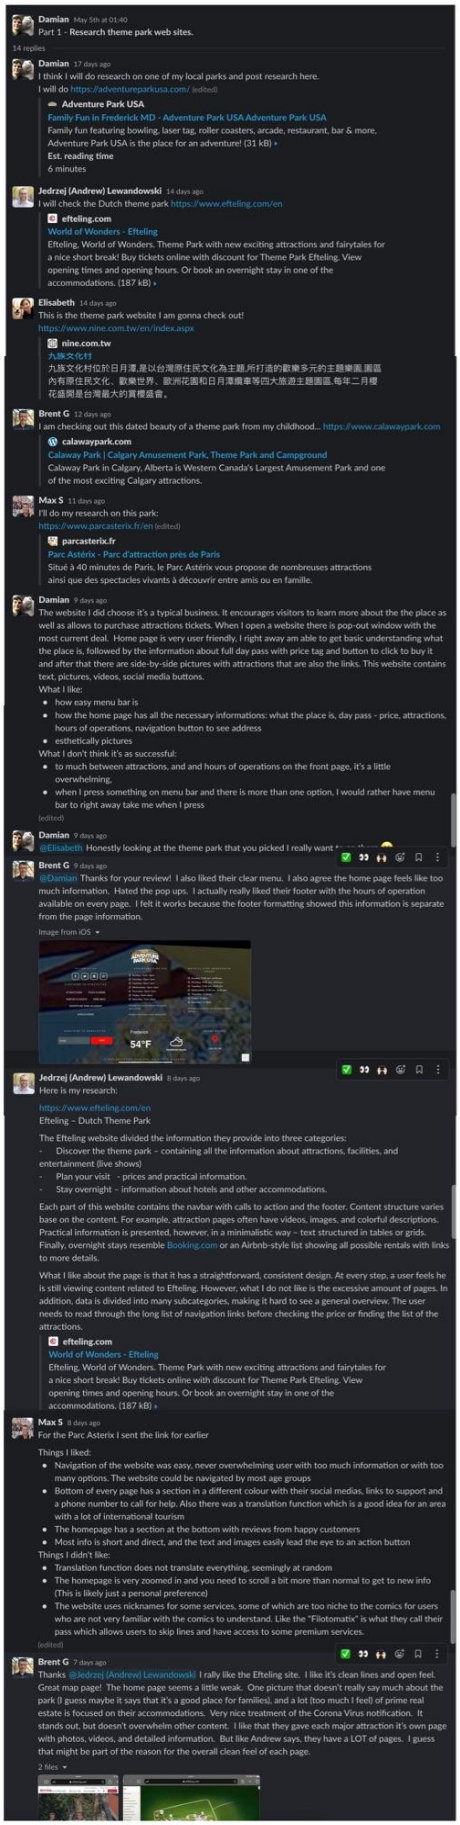

To summarize, the purpose of the website is to advertise and inform. (edited)

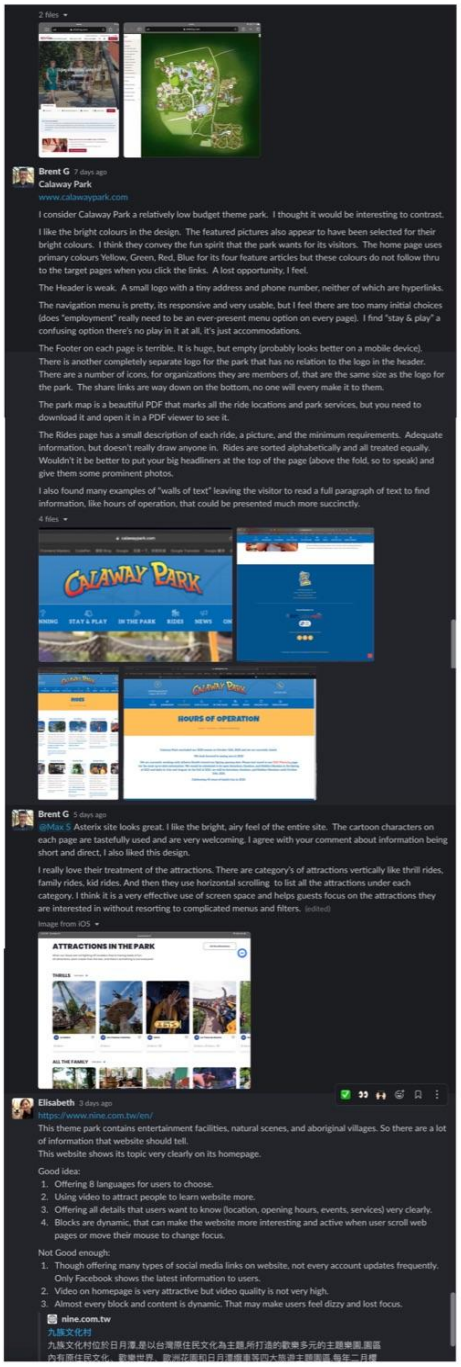

Brent G 10 days ago
I completely agree with all Andrew's essentials listed above. However I feel this more aptly answers the question "what should be the content of the website?" Rather than "What is the purpose of the website?" The purpose of advertising and informing your visitors remains to get them to come to your park. Advertising and informing visitors of the attractions are certainly the primary methods of accomplishing that purpose.

Brent G 10 days ago
Of course this is all semantics. But I do think this fits in with our professor's point about ensuring that the designers clearly understand the goals of the stakeholders who are paying the bill.

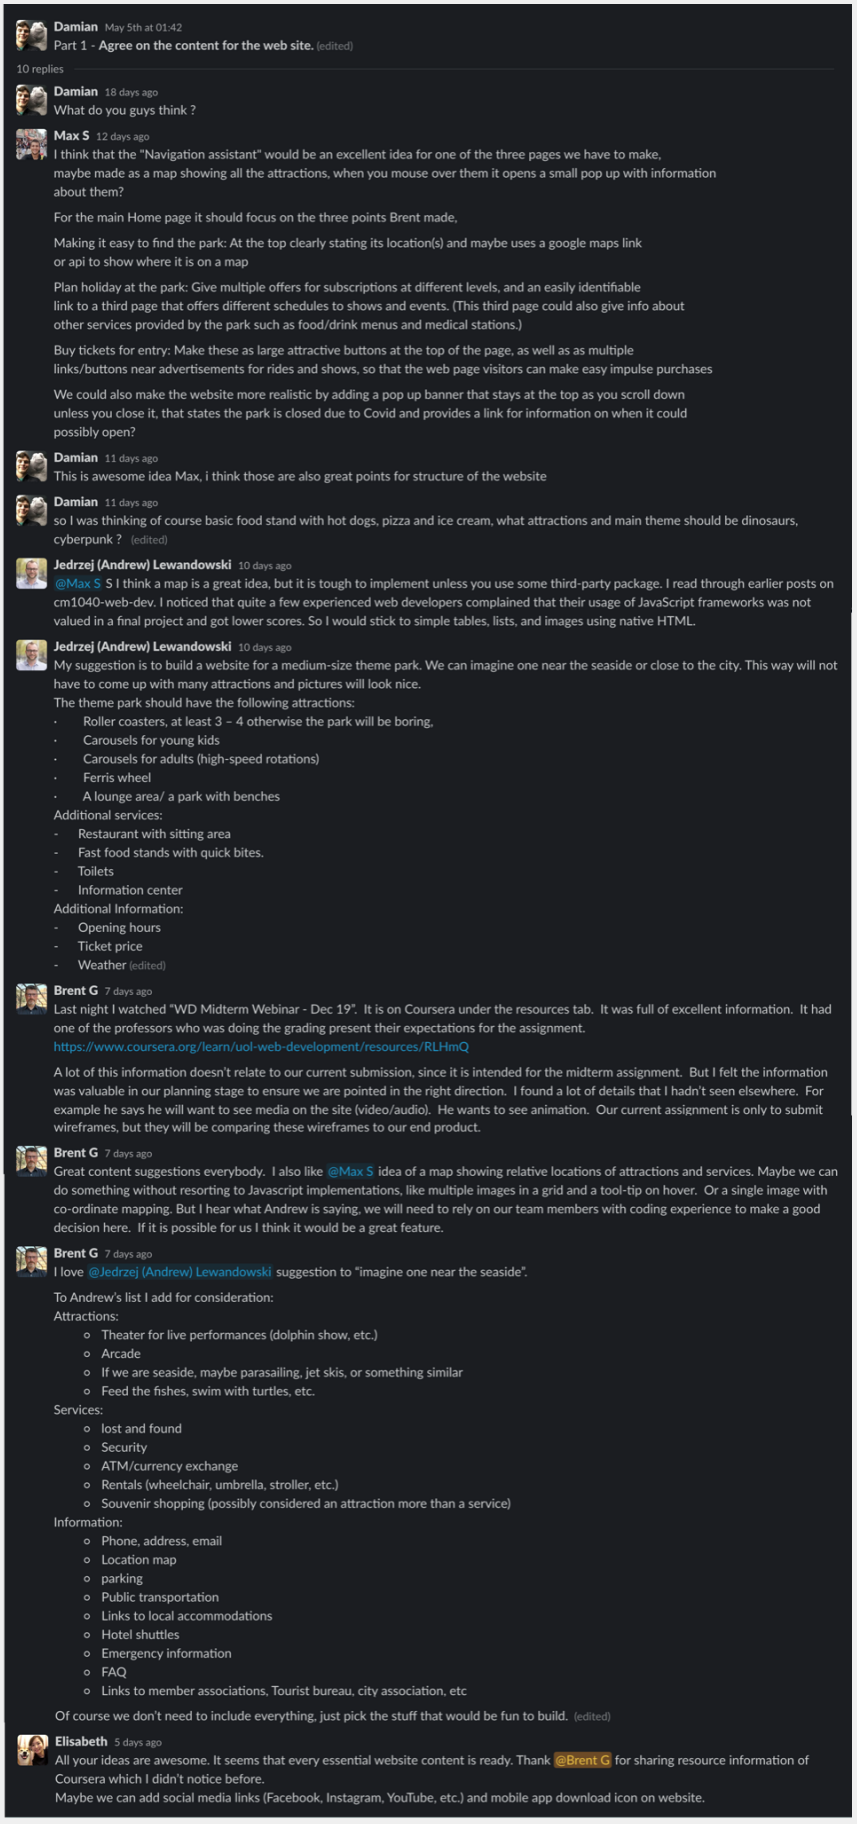

Jedrzej (Andrew) Lewandowski 10 days ago
@Brent G I agree. I think we should stick with your conclusions

Damian 18 days ago
What do you guys think ?

Max S 12 days ago
I think that the "Navigation assistant" would be an excellent idea for one of the three pages we have to make, maybe made as a map showing all the attractions, when you mouse over them it opens a small pop up with information about them?

For the main Home page it should focus on the three points Brent made,

Making it easy to find the park: At the top clearly stating its location(s) and maybe uses a google maps link or api to show where it is on a map

Plan holiday at the park: Give multiple offers for subscriptions at different levels, and an easily identifiable link to a third page that offers different schedules to shows and events. (This third page could also give info about other services provided by the park such as food/drink menus and medical stations.)

Buy tickets for entry: Make these as large attractive buttons at the top of the page, as well as as multiple links/buttons near advertisements for rides and shows, so that the web page visitors can make easy impulse purchases

We could also make the website more realistic by adding a pop up banner that stays at the top as you scroll down unless you close it, that states the park is closed due to Covid and provides a link for information on when it could possibly open?

Damian 11 days ago
This is awesome idea Max, i think those are also great points for structure of the website

Damian 11 days ago
so I was thinking of course basic food stand with hot dogs, pizza and ice cream, what attractions and main theme should be dinosaurs, cyberpunk ? (edited)

Jedrzej (Andrew) Lewandowski 10 days ago
@Max S S I think a map is a great idea, but it is tough to implement unless you use some third-party package. I read through earlier posts on cm1040-web-dev. I noticed that quite a few experienced web developers complained that their usage of JavaScript frameworks was not valued in a final project and got lower scores. So I would stick to simple tables, lists, and images using native HTML.

Jedrzej (Andrew) Lewandowski 10 days ago
My suggestion is to build a website for a medium-size theme park. We can imagine one near the seaside or close to the city. This way will not have to come up with many attractions and pictures will look nice.
The theme park should have the following attractions:
- Roller coasters, at least 3 – 4 otherwise the park will be boring,
- Carousels for young kids
- Carousels for adults (high-speed rotations)
- Ferris wheel
- A lounge area/ a park with benches

Additional services:
- Restaurant with sitting area
- Fast food stands with quick bites.
- Toilets
- Information center

Additional Information:
- Opening hours
- Ticket price
- Weather (edited)

Brent G 7 days ago
Last night I watched "WD Midterm Webinar - Dec 19". It is on Coursera under the resources tab. It was full of excellent information. It had one of the professors who was doing the grading present their expectations for the assignment.
https://www.coursera.org/learn/uol-web-development/resources/RLHmQ

A lot of this information doesn't relate to our current submission, since it is intended for the midterm assignment. But I felt the information was valuable in our planning stage to ensure we are pointed in the right direction. I found a lot of details that I hadn't seen elsewhere. For example he says he will want to see media on the site (video/audio). He wants to see animation. Our current assignment is only to submit wireframes, but they will be comparing these wireframes to our end product.

Brent G 7 days ago
Great content suggestions everybody. I also like @Max S idea of a map showing relative locations of attractions and services. Maybe we can do something without resorting to Javascript implementations, like multiple images in a grid and a tool-tip on hover. Or a single image with co-ordinate mapping. But I hear what Andrew is saying, we will need to rely on our team members with coding experience to make a good decision here. If it is possible for us I think it would be a great feature.

Brent G 7 days ago
I love @Jedrzej (Andrew) Lewandowski suggestion to "imagine one near the seaside".

To Andrew's list I add for consideration:
Attractions:
- Theater for live performances (dolphin show, etc.)
- Arcade
- If we are seaside, maybe parasailing, jet skis, or something similar
- Feed the fishes, swim with turtles, etc.

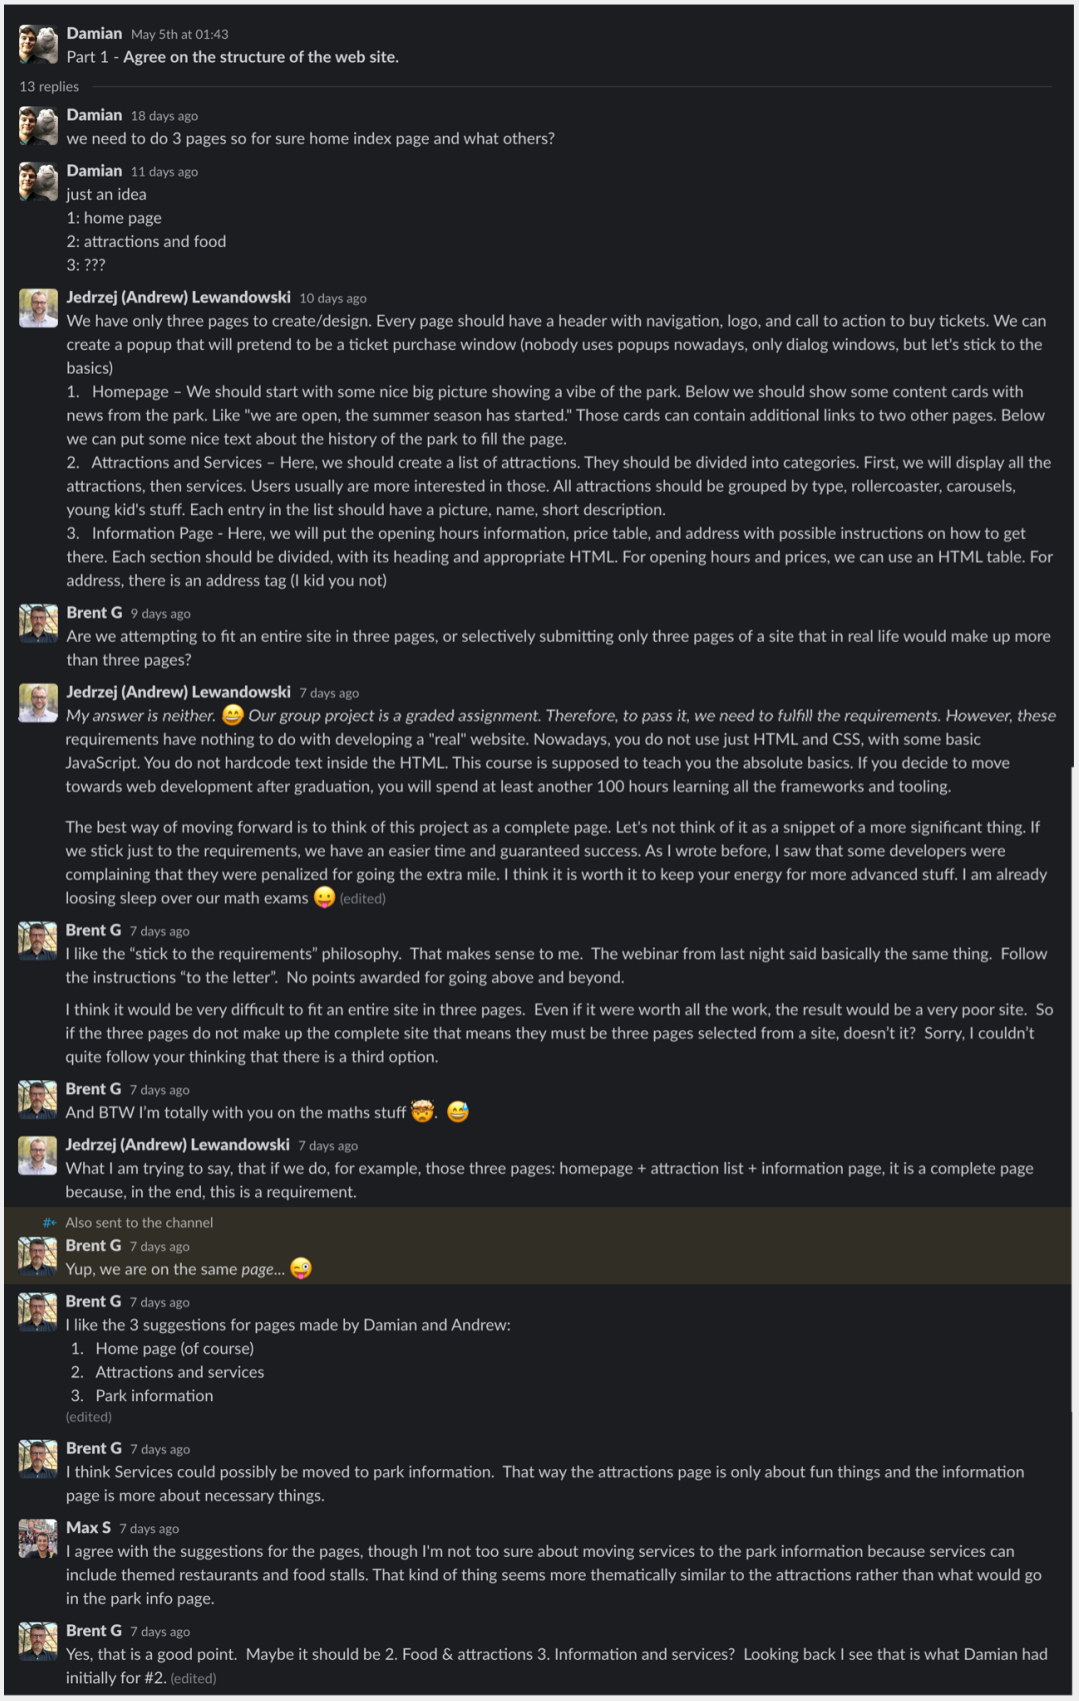

Services:
- lost and found
- Security
- ATM/currency exchange
- Rentals (wheelchair, umbrella, stroller, etc.)
- Souvenir shopping (possibly considered an attraction more than a service)

Information:
- Phone, address, email
- Location map
- parking
- Public transportation
- Links to local accommodations
- Hotel shuttles
- Emergency information
- FAQ
- Links to member associations, Tourist bureau, city association, etc

Of course we don't need to include everything, just pick the stuff that would be fun to build. (edited)

Elisabeth 5 days ago
All your ideas are awesome. It seems that every essential website content is ready. Thank @Brent G for sharing resource information of Coursera which I didn't notice before.
Maybe we can add social media links (Facebook, Instagram, YouTube, etc.) and mobile app download icon on website.

Damian 18 days ago
we need to do 3 pages so for sure home index page and what others?

Damian 11 days ago
just an idea
1: home page
2: attractions and food
3: ???

Jedrzej (Andrew) Lewandowski 10 days ago
We have only three pages to create/design. Every page should have a header with navigation, logo, and call to action to buy tickets. We can create a popup that will pretend to be a ticket purchase window (nobody uses popups nowadays, only dialog windows, but let's stick to the basics)
1. Homepage – We should start with some nice big picture showing a vibe of the park. Below we should show some content cards with news from the park. Like "we are open, the summer season has started." Those cards can contain additional links to two other pages. Below we can put some nice text about the history of the park to fill the page.
2. Attractions and Services – Here, we should create a list of attractions. They should be divided into categories. First, we will display all the attractions, then services. Users usually are more interested in those. All attractions should be grouped by type, rollercoaster, carousels, young kid's stuff. Each entry in the list should have a picture, name, short description.
3. Information Page - Here, we will put the opening hours information, price table, and address with possible instructions on how to get there. Each section should be divided, with its heading and appropriate HTML. For opening hours and prices, we can use an HTML table. For address, there is an address tag (I kid you not)

Brent G 9 days ago
Are we attempting to fit an entire site in three pages, or selectively submitting only three pages of a site that in real life would make up more than three pages?

Jedrzej (Andrew) Lewandowski 7 days ago
My answer is neither. 😀 *Our group project is a graded assignment. Therefore, to pass it, we need to fulfill the requirements. However, these* requirements have nothing to do with developing a "real" website. Nowadays, you do not use just HTML and CSS, with some basic JavaScript. You do not hardcode text inside the HTML. This course is supposed to teach you the absolute basics. If you decide to move towards web development after graduation, you will spend at least another 100 hours learning all the frameworks and tooling.

The best way of moving forward is to think of this project as a complete page. Let's not think of it as a snippet of a more significant thing. If we stick just to the requirements, we have an easier time and guaranteed success. As I wrote before, I saw that some developers were complaining that they were penalized for going the extra mile. I think it is worth it to keep your energy for more advanced stuff. I am already loosing sleep over our math exams 😛 (edited)

Brent G 7 days ago
I like the "stick to the requirements" philosophy. That makes sense to me. The webinar from last night said basically the same thing. Follow the instructions "to the letter". No points awarded for going above and beyond.

I think it would be very difficult to fit an entire site in three pages. Even if it were worth all the work, the result would be a very poor site. So if the three pages do not make up the complete site that means they must be three pages selected from a site, doesn't it? Sorry, I couldn't quite follow your thinking that there is a third option.

Brent G 7 days ago
And BTW I'm totally with you on the maths stuff 🤯. 😅

Jedrzej (Andrew) Lewandowski 7 days ago
What I am trying to say, that if we do, for example, those three pages: homepage + attraction list + information page, it is a complete page because, in the end, this is a requirement.

#+ Also sent to the channel

Brent G 7 days ago
Yup, we are on the same *page*... 😜

Brent G 7 days ago
I like the 3 suggestions for pages made by Damian and Andrew:
1. Home page (of course)
2. Attractions and services
3. Park information
(edited)

Brent G 7 days ago
I think Services could possibly be moved to park information. That way the attractions page is only about fun things and the information page is more about necessary things.

Max S 7 days ago
I agree with the suggestions for the pages, though I'm not too sure about moving services to the park information because services can include themed restaurants and food stalls. That kind of thing seems more thematically similar to the attractions rather than what would go in the park info page.

Brent G 7 days ago
Yes, that is a good point. Maybe it should be 2. Food & attractions 3. Information and services? Looking back I see that is what Damian had initially for #2. (edited)
